

IN THE CLAIMS

1. (Currently Amended) A speech synthesizing apparatus comprising:

behavior-state changing means, responsive to a behavior event, for changing a
behavior state according to a behavior model;

text generating means for generating text in response to said behavior event;

emotion-state changing means for changing an emotion state according to an
emotion model;

selecting means for selecting control information according to ~~at least one of the~~
behavior state ~~and~~ and/or the emotion state; ~~and~~

substituting means, having a number of word substitute dictionaries, for
substituting a word or words included in the text with a word or words from the number of word
substitute dictionaries in accordance with personality information; and

synthesizing means for synthesizing a speech signal corresponding to the text
according to speech synthesizing information included in the control information selected by the
selecting means.

2. (Currently Amended) A speech synthesizing apparatus according to Claim
1, wherein the speech synthesizing information includes ~~at least one~~ or more of the following
items: a segment-data ID, a syllable-set ID, a pitch parameter, a parameter of the intensity of
accent, a parameter of the intensity of phrasify, ~~and~~ or an utterance-speed parameter.

3. (Original) A speech synthesizing apparatus according to Claim 1, further
comprising detecting means for detecting an external condition,

wherein the selecting means selects the control information also according to the result of detection achieved by the detecting means.

4. (Original) A speech synthesizing apparatus according to Claim 1, further comprising holding means for holding individual information, and

wherein the selecting means selects the control information also according to the individual information held by the holding means.

5. (Original) A speech synthesizing apparatus according to Claim 1, further comprising counting means for counting the elapsed time from activation, and

wherein the selecting means selects the control information also according to the elapsed time counted by the counting means.

6. (Currently Amended) A speech synthesizing apparatus according to Claim 1, further comprising accumulating means for accumulating ~~at least one of~~ the number of times the behavior-state changing means changes behavior states ~~and~~ and/or the number of times the emotion-state changing means changes emotion states, and

wherein the selecting means selects the control information also according to the number of times accumulated by the accumulating means.

7. (Currently Amended) A speech synthesizing apparatus according to Claim 1, wherein the personality information is ~~further comprising substituting means for substituting~~

~~for words included in the text by using a word substitute dictionary corresponding to selection information~~ included in the control information selected by the selecting means.

8. (Original) A speech synthesizing apparatus according to Claim 1, further comprising converting means for converting the style of the text according to a style conversion rule corresponding to selection information included in the control information selected by the selecting means.

9. (Original) A speech synthesizing apparatus according to Claim 1, wherein the speech synthesizing apparatus is a robot.

10. (Currently Amended) A speech synthesizing method for a speech synthesizing apparatus comprising:

a behavior-state changing step, responsive to a behavior event, of changing a behavior state according to a behavior model;

a text generating step of generating text in response to said behavior event;

an emotion-state changing step of changing an emotion state according to an emotion model;

a selecting step of selecting control information according to ~~at least one of~~ the behavior state ~~and~~ and/or the emotion state; ~~and~~

a substituting step of substituting a word or words included in the text with a word or words from a number of word substitute dictionaries in accordance with personality information; and

a synthesizing step of synthesizing a speech signal corresponding to the text according to speech synthesizing information included in the control information selected by the process of the selecting step.

11. (Currently Amended) A recording medium storing a computer-readable speech-synthesizing program, the program comprising:

a behavior-state changing step, responsive to a behavior event, of changing a behavior state according to a behavior model;

a text generating step of generating text in response to said behavior event;

an emotion-state changing step of changing an emotion state according to an emotion model;

a selecting step of selecting control information according to ~~at least one of the~~ behavior state ~~and~~ and/or the emotion state; ~~and~~

a substituting step of substituting a word or words included in the text with a word or words from a number of word substitute dictionaries in accordance with personality information; and

a synthesizing step of synthesizing a speech signal corresponding to the text according to speech synthesizing information included in the control information selected by the process of the selecting step.

12. (New) The speech synthesizing apparatus according to claim 1, wherein the personality information is representative of one or more of the following items: type, gender, age, temperament, or physical condition.

13. (New) The method according to claim 10, wherein the personality information is representative of one or more of the following items: type, gender, age, temperament, or physical condition.

14. (New) The recording medium according to claim 11, wherein the personality information is representative of one or more of the following items: type, gender, age, temperament, or physical condition.
